OpenStack Solutions

- Delivery Specialists
- Development
- Training & Education
- Level 1 & 2 HelpDesk
- Certified Engineers

Big Data and Storage

- Web Object Storage
- Big Data Technologies
- Containerized / Mobile Storage
- Archive Solutions

Cloud Computing

- Storage as a Service
- Infrastructure as a Service
- OpenStack Solutions
- FISMA High Ready
- Tailored Managed Services

Security Practice

- Risk and vulnerability support
- Information Assurance
- Product implementations
- Independent Verification & Validation (IV&V)
- Risk & Compliance

ALLIANCE TECHNOLOGY GROUP
7010 HI TECH DRIVE
HANOVER, MD 21076

There is a cross industry revolution underway in which software innovation is radically impacting the global economy, propelling companies to the top of their industries, while others find themselves struggling to keep pace and remain relevant.

Cloud and Open Source are at the epicenter of this new competitive landscape. Agile infrastructures are allowing organizations to develop faster, experiment more often, and leverage IT as a competitive advantage.

Alliance Technology Group's IPA (Infrastructure, Platform, Application as a Service) Division helps our customers navigate through a sea of emerging technologies and delivers solutions that transform technology infrastructures into flexible and secure architectures that deliver self-service IT, rapidly, and at scale.

Providing Automation and Orchestration of IT resources to deliver Self Service IT, Rapidly and at Scale.

- Resilient, flexible and elastic infrastructures that deliver the power to innovate at speed with agile infrastructure.
- Open source architecture that promotes investment protection and flexibility while avoiding proprietary vendor lock-in.
- Massive scalability for the growing needs of the enterprises deploying private clouds.
- Delivers the promise of cloud with an extensible and robust foundation for achieving the benefits of cloud computing.
- Easily control, manipulate and manage your resources while seamlessly integrating different cloud services like storage, compute and network.
- Asynchronous and distributed architecture with common API's and authentication, that also enables federated clouds.
